

PROBLEM High Costs & Wait Times: Traditional mental health screening and therapy are expensive and often have weeks-long waitlists. Stigma & Privacy Concerns: Many people avoid seeking help because they feel embarrassed or fear being judged. Lack of Accessible, Immediate Support: When someone is experiencing a mental health dip, they need immediate guidance, not an appointment for next month.	SOLUTION -->A private, instantaneous AI chatbot powered by the ultra-fast GROQ API.-->Uses Retrieval-Augmented Generation (RAG) to ensure all advice and screening questions are strictly pulled from verified mental health PDFs.-->Provides a safe, stigma-free environment for initial mental health screening and continuous well-being check-ins.	UNIQUE VALUE PROPOSITION -->Lightning-fast, strictly private, and scientifically grounded mental health screening accessible 24/7 right from your device. Get safe, reliable guidance without the wait or the stigma, directly supporting the "Good Health and Well-Being" initiative.	UNFAIR ADVANTAGE High-Speed Accuracy: The combination of GROQ's low-latency inference with a highly specific, curated dataset of verified psychological PDFs, ensuring fast responses that don't suffer from generic AI hallucinations.	CUSTOMER SEGMENTS -->Students managing academic pressure and career anxiety. Young professionals experiencing burnout in high-stress corporate environments.-->Individuals in remote or underserved areas lacking local mental health infrastructure.
EXISTING ALTERNATIVES Traditional in-person therapy or university counselors. National crisis hotlines (which can be intimidating or have long wait times). Generic AI chatbots (like standard ChatGPT) which may hallucinate and lack grounding in verified medical documents.	KEY METRICS Daily Active Users (DAU): Number of people interacting with the bot daily. Screening Completion Rate: Percentage of users who finish the full screening assessment. API Latency & Uptime: Ensuring the GROQ API integration remains lightning-fast. User Feedback Score: Thumbs up/down ratings on the usefulness of the bot's PDF-backed responses.	HIGH-LEVEL CONCEPT -->A 24/7 digital triage nurse for your mind, powered by high-speed AI.	CHANNELS -->University and college wellness programs. Corporate HR initiatives for employee well-being.-->Social media awareness campaigns (LinkedIn, Instagram) focusing on burnout and stress.-->Open-source developer communities and tech portfolios.	EARLY ADOPTERS -->Tech-savvy university students (e.g., at institutions like NSHM Knowledge Campus) dealing with heavy coursework and project deadlines.-->Recent B.Tech graduates adapting to fast-paced, demanding corporate roles.
COST STRUCTURE API Costs: GROQ API token usage (as the user base scales). Hosting & Deployment: Cloud infrastructure costs (AWS/GCP) to migrate the project from a local .ipynb notebook to a live web server. Data Storage: Secure, encrypted database costs for managing session logs and maintaining user privacy.			REVENUE STREAMS B2B Licensing: Selling the customized chatbot to university campuses or corporate HR departments as an employee/student wellness tool. Freemium Model: Basic mental health screening is free; detailed, personalized wellness reports generated from the PDF database are premium. Grants: Applying for tech-for-good funding aligned with the "Good Health and Well-Being" Sustainable Development Goal.
